

The easiest way to LOOK BETTER— TODAY

Unlike other laser or liposuction treatments, the SLIM ProcedureSM uses advanced technology to deliver dual wavelengths of laser light, specifically designed to easily melt fat in large areas—with less downtime, little to no bruising, and remarkable results.

Unlike traditional liposuction, SlimLipo is an effective device for melting fat and not simply tearing through tissue structure. The result is less body trauma and significant fat removal and dermal heating. The heating of dermal tissue has been shown to have skin tightening results.

It's time to
get SLIM!

Get SLIM

- ✓ Remove unwanted fat
- ✓ Outstanding results
- ✓ Minimal discomfort
- ✓ Visible improvement!

The SLIM ProcedureSM uses advanced SlimLipoTM laser technology to melt and remove unwanted fat from your body—minimal downtime, fantastic results.

FREQUENTLY ASKED QUESTIONS

What is the SlimLipo™ laser? How can the SLIM ProcedureSM help me?

The SlimLipo™ laser is revolutionary because it utilizes an ideal “fat melting” laser wavelength. Via a few tiny incisions, this patented laser gently melts fat for removal from your body. With SlimLipo’s superior technology, you’ll experience little downtime—get ready to show off your new slimmer look!

What results can I expect?

Dramatic, slimmer results—take a look at our clinical before and after photos.

Which parts of my body can be treated?

Areas of unwanted fat—your tummy, waist, hips, thighs, knees, buttocks, arms, and under your chin can be treated with SlimLipo™.

Is this just for women?

No—the SLIM ProcedureSM is for both women and men who have areas of unwanted fat.

How fast is the SLIM ProcedureSM?

The SLIM ProcedureSM is fast—often under an hour for a given area. There is also a pre-procedure preparation where the physician will perform an evaluation and go over any questions.

How many treatments will I need?

Typically, one treatment is enough for a given area.

What does this treatment feel like?

You may be pleasantly surprised how little discomfort the typical patient feels. Our state-of-the-art system has been carefully designed to ease unnecessary trauma to the body—your physician will choose the anesthesia most appropriate for you.

Is this different from traditional liposuction?

Yes, very different. Traditional liposuction leaves larger scars, causes more bleeding and more post-treatment pain, and requires longer healing times than the SLIM ProcedureSM. Also, traditional liposuction physically breaks up and suctions out intact fat cells, while the SLIM ProcedureSM efficiently melts and liquefies fat, which is then gently removed from your body. Answered simply: SlimLipo™ is easier on your body.

How long is the SLIM ProcedureSM recovery time, and what should I expect?

Typically, the SLIM ProcedureSM recovery time is shorter than traditional liposuction. Many patients can go to work the very next day. You may see slight bruising at the small incision sites, which may take several weeks to completely resolve. Compression garments may be required for a short period of time. Ask your physician about post-procedure instructions and what you should expect during your recovery period.
